### Failure to Submit Initial Service Line Inventory

Beulah Utilities District was required to prepare and submit an initial service line inventory, as required by EPA's Lead and Copper Rule Revisions, to the Department by October 16, 2024. The inventory must include all service lines connected to the system regardless of ownership. Additionally, the system was required to review specific records to identify the service line material as either lead, galvanized requirements replacement, lead status unknown, or non-lead. We failed to develop and submit the required inventory and certification of records review by the required due date.

Exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can lead to new learning and behavior problems or exacerbate existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have increased risk of these adverse health effects. Adults can have increased risks of heart disease, high blood pressure, kidney, or nervous system problems.

Please share this information with all the other people who drink this water, especially those who may have not received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in public notice or distributing copies by hand or mail.

The Lead & Copper Report has been submitted;

Should you have any questions concerning this violation or monitoring requirements, please contact:

If you have any question's you may contact Jeff Williams @ 334-737-5374.
